

GECKO LT & GECKO LT^{WMN}

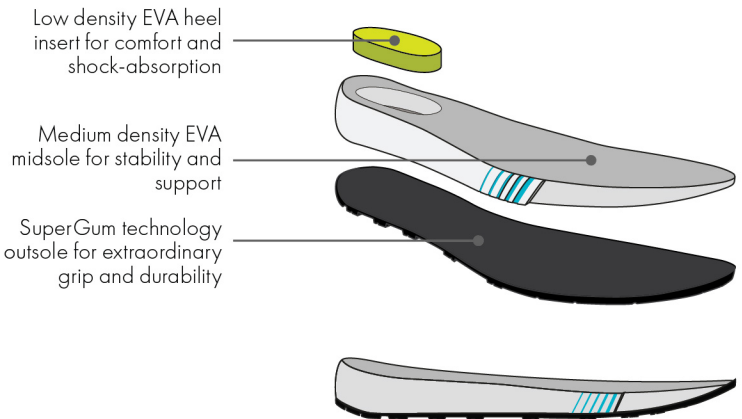

72606/351 & 352

PRODUCT POSITIONING

The GECKO LT is a lightweight, precise, technical approach shoe with high end technologies in a minimalist design. The upper features a full-length, highly customizable lace closure system and is constructed of a lightweight, durable fabric upper which is extremely abrasion resistant to handle the gnarliest of talus fields. A dual-density EVA midsole provides full length cushioning and support and features an overlasted sticky rubber toe rand for additional protection and friction. Our super sticky PRESA® SuperGum outsole has low lugs and a climbing zone for a combination of excellent grip as well as increased precision and support underneath the toes. The GECKO LT is the perfect connection between climbing and technical approach.

FEATURES AND BENEFITS

- 01 Durable Upper:** Lightweight abrasion resistant fabric upper can handle even the gnarliest of talus fields and sharp rock edges
- 02 Midsole:** Medium-density compression molded EVA for support with a low-density compression molded EVA for support with a low density heel insert for enhanced cushioning.
- 03 Rand:** An overlasted sticky rubber toe rand provides security and grip while climbing while also protecting the EVA midsole from harsh rock abrasions
- 04 Lace To Toe:** Full length lace-to-toe-closure system allows for a dialed in precision fit when the terrain gets technical
- 05 Outsole:** PRESA® APR-01 sole provides extreme grip and traction while hiking, scrambling, or climbing

SPECIFICATIONS

- Upper: **Eco Fabric + Film**
- Lining: Stretch Textile
- Insole: Hybrid Strobel
- Midsole: EVA
- Outsole: PRESA APR-01 / SuperGum
- Last: Men's - CUAN
Women's - CUAN
- Sizes: Men's - 40-46 (1/2 sizes); 47-48 (whole sizes)
Women's - 36-42 (1/2 sizes)
- Weight: Men's - 320g; 11.3oz (1/2 pair, size 42)
Women's - 280g; 9.9oz (1/2 pair size 38)
- Origin: China

TECHNOLOGIES

TECHNOLOGY - MATERIALS - CONSTRUCTION

PRESA® APR-01 Outsole – Sole where sensitivity, precision and grip count. It is light, stable and very sensitive; characteristics combined with the performance compound to make the ideal shoe for technical approach.

SuperGum Rubber – Exclusive to SCARPA, the SuperGum rubber compound was developed to provide equal or better slip resistance as compared to other high-friction rubbers but with vastly superior abrasion resistance. It was formulated to deliver high friction performance in both wet and dry conditions, but at the same time offers 3 times the abrasion resistance. SuperGum is the ideal rubber compound for SCARPA approach shoes.

SCARPA Planet Friendly – Our products tread the most wonderful and unspoiled landscapes on earth. We feel we must do our best to preserve these landscapes. "Planet Friendly", products made of environment-friendly materials refer to products in which materials and processes are specifically chosen for their environmentally friendly characteristics.

FIT:

CUAN last. Medium minus heel and midfoot fit, with a slightly narrow, low volume forefoot. A more precise fit for precision in technical terrain.

SOCK-FIT^{LW}
BY SCARPA

Sock-Fit LW System – Sock-fit LW, or "Light Wrap" construction, is the most minimal version of Sock-fit that SCARPA offers. Most of our Trail Running models incorporate this innovative construction. The Sock-fit LW system uses a stretch material combined with a minimal, stretch tongue that wraps both sides and the top of the instep, eliminating the tradition gusset construction, providing gentle pressure and support to both reduce bulk and enhance the fit of the shoe.
